WINk
White Paper
Introduction to WINk

Drawing comparisons to the meteoric rise of the modern web, blockchain technology has shown signs of tremendous growth potential and transformative power. Just as the internet needed Web 2.0 to engage users with more social, usable, and interoperable functionality, blockchain technology’s path to mass adoption hinges upon creating a seamless user experience. While the industry is still young and the potential of decentralized applications remains largely untapped, the WINk is positioned to spark Web 3.0 on the TRON network with its revolutionary DApp experiences.

With its emphasis on high throughput and low transaction costs, the TRON protocol will allow WINk to facilitate widespread adoption of blockchain technology through consumer use cases. TRONbet was the first DApp ever launched on TRON and has become the leading application in terms of both user numbers and transaction volume across all major blockchains. Despite numerous competitors entering the market, TRONbet has remained on the cutting edge of blockchain gaming because of its superior product and commitment to the community.

The gaming platform started out with only one title, but now boasts the largest library of games on the blockchain. Social features, live operations, and events have only added to the user experience. The platform also aims to give back to the community through events such as the Binance Charity Poker Tournament. As TRONbet enters the next phase of its platform strategy, this commitment to excellence and community will remain the cornerstone of TRONBet’s growth.

In anticipation of TRONbet’s sustained growth, and a strategic investment from the TRON Arcade fund, the team has decided to officially rebrand TRONbet as WINk (Wink.org). WINk will be blockchain’s premier gaming platform for users to play, socialize, and stake across multiple blockchain ecosystems.

The WIN token will be the centerpiece of this new platform. Through behavioural mining, innovative token economy design, and other incentive mechanisms, developers will be given the power to build the best DApps possible, and players will be enabled to become platform stakeholders as the platform continues on its path of providing best decentralized gaming experiences on the blockchain.

About TRONbet

As the world’s first trustless & permissionless, high performance gaming platform, TRONbet utilizes the experience of industry experts in both blockchain and gaming to build an exceptional blockchain gaming experience.

TRONbet is the world’s top DApp in terms of users, transaction count, and transaction volume, topping the charts on both of the top tracking sites DAppRadar and DappReview. TRONbet’s daily volume is often around $10million USD with over 4,000 daily active users.

Screenshots taken in mid-June 2019
TRONbet also boasts one of the largest communities in blockchain where over 16,000 members are actively engaged across multiple social channels. The strong social element of TRONbet's platform binds the community together and gives players additional reasons to keep coming back.

Please visit Wink.org for more information.

Why TRON?

WINk intends to leverage TRON’s ambition to establish “a truly decentralized Internet” to become the premier blockchain gaming platform across all chains. From our perspective, the TRON protocol has managed to meet expectations by becoming one of the largest blockchain-based operating systems in the world. We intend to take advantage of TRON’s high throughput and scalability to provide the best user experience possible for the community we serve.

As blockchain technology proliferates through modern society, WINk will help bring about mass adoption by engaging and educating the everyday consumer.

Scalability

WINk will utilize the TRON network’s 2000 TPS capacity and 3 second block times to provide instantaneous gameplay and reliable service no matter how big the platform grows. WINk has also developed its own scaling solutions that have been implemented in games like slots and poker. These optimizations have pushed WINk’s gameplay to the forefront of industry standards and the team remains committed to improving the platform’s decentralization and usability.

Free Transactions

WINk puts the user experience first, and that means free transaction costs are a necessity. For games that run directly on the TRON blockchain, users receive bountiful supplies of energy and bandwidth for staking a small amount of TRX. The WINk platform will also help cover some of these costs by putting up its own energy and bandwidth for its user transactions.

Furthermore, WINk will be integrating its scaling solution with new games that run on the platform to eliminate transaction costs completely. Games like slots and poker currently run cost-free, with many more titles to be added in the future.
Liquidity & Adoption

The WINk team will be working closely with TRON to leverage all the opportunities TRON’s rapidly growing ecosystem has to offer. Starting with an IEO, the WIN token will build on top of ANTE’s existing demand and liquidity by bringing in stakeholders from TRON, BitTorrent, and other communities across the blockchain. TRON’s strong relationships with industry leaders, including the top exchanges, will facilitate WIN’s widespread adoption.

Going forward, TRON will continue adding utility to the network with WINk being one of the earliest adopters.

- **User acquisition channels.** With several upcoming partnerships, TRON will bring DApps to a pool of over 300 million users. Just like with BitTorrent’s community, each new partner community will be introduced to blockchain and cryptocurrency through WINk’s games.

- **Decentralized financial products.** Integrations for stablecoins, security tokens, microloans, and more will bring new payment possibilities, easier on-boarding, and new forms of value generation.

- **Decentralized development infrastructure.** Integrations with products like the BitTorrent File System (BTFS) and the SUN network will provide new development possibilities, helping WIN maintain its edge on the competition.

The immediate future looks bright for WINk. With the acquisition of BitTorrent and its 100m MAU user base, TRON currently forms the largest decentralized network in the world. BitTorrent Speed, a blockchain implementation of the BitTorrent protocol, will be the first widely adopted blockchain use case that educates and engages users from across the world on the potential of blockchain technology.

Introducing this pool of users to WINk gives them new opportunities to utilize cryptocurrency and will convert them from blockchain enthusiasts to permanent members of the community. With such synergy between WINk’s product and TRON’s ecosystem, the limit is beyond the moon!
How It Works

For Developers

The WINk platform provides a set of tools so that developers can focus on creating premium DApps while the platform takes care of the rest. For the platform’s services, the developer will pay a small percentage of the their DApp’s operating income. Developers are encouraged to devise new ways to engage community members and provide incentives through clever economy design.

For the Community

The community of DApp players will benefit as a whole as they join the platform on its odyssey towards becoming the world’s leading blockchain gaming platform. The more a user plays, the more tokens they will be able to mine. Users will be able to show their loyalty to specific DApps on the platform and mine tokens bound to individual DApps.

For WIN HODLers

WIN token holders are the core of the WINk gaming platform. Every DApp hosted on the gaming platform will share a portion of the winnings with WIN token holders through the “WinDrop.” The WinDrop will take place everyday and incentivize ecosystem participants with TRX. The amount of TRX distributed to each user will be proportional to the amount of Win Power they hold. Participants receive Win Power for staking their WIN tokens. This mechanism will aggregate more activity on the platform and continue to increase the value of WIN.

More details about the WinDrop system will be released in the future. The team believes this broad token distribution mechanism will help grow a vibrant community engaged with the platform’s growth, partnerships, governance process, and more.
Please visit Wink.org for more information.
Token Economy

WIN Token

WIN token, a TRC20-based utility token, is WINk’s platform token. WIN holders are the platform’s core user base and will receive numerous benefits for their loyal support of the token. Much like the VIP guests of Vegas gaming establishments, WIN token holders will be treated like blockchain royalty. WIN tokens will only be earned through the IEO, secondary markets, airdrops, and promotional events. The following is a non-exhaustive list of WIN token’s use cases.

- **Staking and governance rights.** WINk will actively encourage its user base to participate as both players and community members. Users will be able to use their WIN tokens and Win Power to participate in the governance of the WINk platform. By incentivizing a knowledgeable and engaged community, WINk can improve retention rates and ensure the platform grows in response to player feedback. Read the ecosystem section for more details, and follow WINk’s channels to stay up to date.

- **Alleviating resource burn.** While the WINk platform will have minimal costs by leveraging TRON’s infrastructure, high volume players and DApps that serve a large user bases will still benefit from holding and staking WIN. Holding WIN will decrease the amount of resources spent on every transaction.

- **Exclusive opportunities and experiences.** The WINk and TRON team are veterans within the gaming industry and understand how to build hype and create unforgettable game experiences. The recent Binance Charity Poker Cup that was hosted on the platform gave users a once-in-a-lifetime opportunity to play alongside celebrities like Spencer Dinwidde, CZ, Justin Sun, and more. In the future, the WIN token will provide access to similar opportunities that can’t be accessed on any other platform.

- **Gameplay discounts.** This benefit might come in the form of a direct discount, better payouts, or an increased mining rate depending on the DApp and development team. As more developers come onto the platform and build out their library of game titles, WIN holders can look forward to additional benefits.
that help their cryptocurrency go the extra mile.

- **Stake for Win Power.** WIN token holders will maximize the value of their tokens by staking for Win Power. A user’s Win Power will be directly proportional to the amount of WIN that is staked. Staking will occur via smart contract. While staked WIN cannot be traded, sold, or used in any way. In order to unstake WIN, users must submit a request and wait for a certain amount of time. Users can reclaim all staked tokens. The benefits of accumulating Win Power will vary between games and continue expanding as more features are added. More details coming soon.

- **Distribution of Staking Rewards.** WIN will be used to redistribute rewards to those who make the WINk platform possible. The exact staking and distribution mechanisms will be communicated in more detail as the project gets closer to launch. The reward will be distributed in the form of TRX, which is a percentage of the revenue from the platform’s operations. The reward distribution will happen automatically, with no artificial hoops for users to jump through.

**DApp Tokens**

WINk will be an open, non-exclusive platform that supports applications running on different blockchains like TRON, Ethereum, EOS, Binance Chain, etc. There will be no downside to playing a game that runs on a blockchain other than TRON. In fact, each DApp will have its own utility token that provides extra value. DApp tokens will be uniquely designed to the specifications of each DApp developer and cannot be traded on any secondary market.

Although being unable to trade DApp tokens might feel unfavorable, this decision was made to help the WIN token retain value. DApp tokens will still capture long-term value by giving users exclusive access to WIN token airdrops. The airdrop schedule is coming soon, and more benefits for accruing DApp tokens will be added continuously.
WIN Token Issuance

WINk will create a total issuance of 999 billion WIN tokens. Tokens will be allocated in the following proportions.

Initial Community - 12%

A large portion of WIN will be distributed to the loyal ANTE holders that played TRONbet. When a user goes through the token swap process, they will receive a certain amount of WIN for each ANTE they freeze.

Please read this blog post for more details about the token swap process: https://medium.com/@tronbethelp/ante-win-prepare-for-take-off-353d41b43401

Understandably, there will be concerns over the WIN token's greater supply compared to ANTE. Rest assured, the TRON team has come up with a plan to combat inflation.
• **Limited circulating supply.** When WIN is initially released, only a small portion of the token will be in circulation. While most token holders will need to wait through lockups, vesting periods, or both, WIN tokens swapped from ANTE will be immediately available for staking and trading. The initial circulating supply of WIN will only be 20.99% of the total supply. Tokens given to ANTE holders will comprise over 57% of the initial circulating supply. Given WIN's vesting schedule, the ecosystem will be given time to develop before experiencing an influx of new tokens. Users will be given ample opportunity to buy or sell WIN, and put themselves in the best financial position possible.

• **Incentives to HODL.** We foresee WIN's value appreciating as utility continues being added. At first, utility and value will largely come from airdrops and the WinDrop. Further on, the introduction of governance, ecosystem fund, and 3rd party developers will carry the WIN token's value accrual.

• **Prestigious partners, advisors, and investors.** The WINk rebrand will be an opportunity for new stakeholders to come into ecosystem. These stakeholders will give WINk new opportunities for partnerships, user acquisition, technological integrations, and more. Users will feel the positive impact immediately with Binance facilitating the WINk IEO and TRON investing in the platform’s long-term future. More partnerships are coming soon!

• **Massive user acquisition.** The Binance IEO, TRON investment, and other aspects of the WINk rebrand will give the platform the resources necessary to improve onboarding and usability to maximize conversions from marketing campaigns to hundreds of millions of users. More users will increase the daily rewards pool and ultimately help the WIN token succeed.

• **Expanding game library.** WINk will introduce new developer tools, easier on-boarding, and support for games on all public chains. Furthermore, partnerships that bring in AAA-quality games will add diversity to WIN’s offerings. We project that more games will lead to greater player engagement, which benefits all stakeholders on the platform.

Given these considerations, it is unlikely that ANTE holders will lose value when swapping their tokens either in the short-term or the long-term. As the WINk platform grows, we hope the original ANTE holders will continue to hodl WIN and become active stakeholders in the ecosystem’s new games and partnerships.
Public Sale - 5%

The IEO will take place on August 8th, 2019. Token purchased through this initial sale will have no lockup and will be immediately available for trading.

Airdrop - 5%

Sometime in August 2019, WINk will initiate its first airdrop of WIN token to TRX holders. This airdrop will distribute 10,989,000,000 WIN, which will be 22% of the total airdrop allocation. Make sure to follow WINk’s announcements to be a part of this momentous occasion.

During the 12 months following the initial airdrop, WINk will distribute 11,880,000,000 WIN (24% of the airdrop allocation) to TRX holders. The same amount of WIN will be distributed every month, but the number of airdrops and how they are structured may vary. For example, some months might feature a single airdrop to all types of token HODLers and others might feature several airdrops exclusive to holders of certain DApp tokens.

WIN token airdrops will last for over 3 years, with the amount being distributed to increase year over year.

Our airdrops will have no hoops for users to jump through - if you are holding the specified token, you will be eligible for WIN airdrops. All official wallets relaying on TRON’s network and carrying the specified tokens will be eligible for WIN airdrops corresponding to the amount they are holding. Exchanges that support the WIN token airdrop will be announced through our social channels. No minimum amount of tokens will be required to qualify for WIN airdrops. Please stay tuned to receive more information on these opportunities.

WIN will be airdropped according to this schedule:

- 10,989,000,000 WIN in August 2019.
- 11,988,000,000 WIN from September 2019 to August 2020
  - 999,000,000 WIN every month
- 12,870,000,000 WIN from September 2020 to August 2021
○ 1,082,250,000 WIN every month

● 13,860,000,000 WIN from September 2021 to August 2022
○ 1,165,500,000 WIN every month

Platform Development - 7%

Every month, a portion of WIN tokens will be allocated for the growth of the WINk platform. These tokens will be used for hiring additional developers, infrastructure costs, exploring new technologies, and more. In order to ensure accountability, the WINk team will provide the community an annual report of how the development funds were spent and what results were achieved.

Gaming Partnership - 9%

WINk will be working with high-profile game developers, publishers, and IP-holders to bring their properties to the WINk platform. By bringing on popular games with iconic characters and brands, WINk will acquire the mainstream appeal necessary to bring blockchain gaming to the average consumer.

Team - 10%

WINk’s team is committed to the platform’s long-term growth and success. All of the core team members have committed to developing for the platform throughout the foreseeable future and have performance-based incentives tied into their agreements.

Game Ecosystem - 27%

WINk will use funds to implement frequent ecosystem upgrades to improve the platform and its users’ gaming experience. Examples of this include on-chain governance, a DApp store, ecosystem fund, new social features, payment rails, and much more. WINk will provide an annual report of how the WIN tokens allocated towards the ecosystem are used.

Check out the “Ecosystem” section below for details on how WINk will develop.
Please visit Wink.org for more information.

Reserve - 3.75%

A small portion of WIN tokens will be held in a multisig cold wallet and remain in lockup indefinitely.

Strategic Partnership - 6.25%

WINk has plans to leverage strategic partnerships and advisories to expand across multiple industries and become the premier platform on the internet to play, socialize, and stake. By working with the biggest names in blockchain, gaming, and entertainment, WINk can quickly establish itself as the industry standard. The Binance IEO and TRON investment are the first steps towards making this dream happen, and there is only more to come.

Seed Sale - 15%

WINk will offer a new group of investors, made up of leaders in their respective industries, the chance to become platform stakeholders through a special token sale. More details coming soon.
WIN Token Release Schedule

Please visit Wink.org for more information.
Ecosystem

Effective on-chain governance requires new technology such as DAOs, cryptographic voting systems, and collaboration interfaces to be built, maintained, and updated. The WINk platform will take on this responsibility, and provide highly effective tools for DApp developers to utilize within the WINk gaming ecosystem.

As a result, developers will be able to focus on creating premium DApp experiences, while allowing WINk to take care of the platform, system, ecosystem development, and maintenance. If all goes well, the community will be the greatest benefactors from this system. Users will be able to select from blockchain’s most premium gaming experiences straight from their web browser, and rest assured that their cryptocurrency is safe in an ecosystem built by an experienced engineering team and rigorously tested to be safe and secure.

WINk will build this ecosystem through a process of constant self-assessment and development. Additionally, on-chain governance will be used to target and fund improvements. The community will have a strong say on which projects they want to see completed before updates are then launched on the network. The WINk gaming ecosystem will also include the following support.

Developer Portal

Developers that join the ecosystem will be able to access the latest SDK, APIs, and technology documents needed to connect to the ecosystem.

The portal would also include a set of tools for developers to utilize the blockchain, reward pools and mining systems, social features, identity management systems, wallets and more. This set of tools will allow both experienced and inexperienced developers alike to streamline their development process and bring users the best gaming experience possible.

DApp Store & Content Discovery

After developing their DApps, developers can submit it to the DApp Store for easy distribution. If approved, DApps will be listed on the DApp Store in several different
locations based on DApp category and popularity. The platform’s editorial team will also review and recommend certain DApps from time to time, highlighting these DApps in premium spaces.

WINk is also working on building out a content discovery mechanism, where users can receive recommendations on new games as well as incentives to try them out. We want to give newcomers to the blockchain development scene the chance to make it big, so fresh talent has a reason to stick around.

Developers also have the option to pay for promotional advertisements on the DApp Store to drive more traffic to their games. Pricing will be based on a combination of cost per mil or cost per location/time. The revenue from these ads will be shown transparently and aggregated to the platform revenue. A portion of these rewards will later be given to users based on their Win Power.

As any game developer would tell you, it’s all about getting users to your platform and then working hard to retain a healthy community. As such, user acquisition and retention has been a major roadblock for most blockchain gaming projects since development teams have started to explore the space. Many projects across Ethereum, EOS, and TRON have failed due to the costs associated with finding a user base. With many DApps centering around token economies and needing users to drive demand and liquidity, solving the user question has become of utmost importance.

The TRONbet project was lucky to have first-mover advantage on TRON and then leverage their experience in the games industry to maintain growth. The WINk team doesn’t want low visibility and expensive UA to prevent more developers from entering the space. Therefore, the team will design the WINk DApp store as an opportunity for all projects in the space to acquire users more efficiently.

Community

The community will be based off the existing TRONbet community which currently has over 16,000 engaged players.

We understand the importance of social components in gaming, so there are quite a few major updates in the works. Over the next year, the development team will roll out a revamped account creation system, a new chat system, friends lists, gift exchange, and more. Our goal is to foster a sense of community where users can come together to share ideas about gaming, crypto, or whatever else they want to discuss.
Developers will have direct access to engage with these social channels to provide services, support, and even community engagement events such as promotional campaigns, gifts or giveaways.

**Payment Services**

Developers can integrate WINk’s platform payment services into their DApps. The goal of this functionality is to make any payment as easy as possible, comparable to the simplicity of making an in-app purchase on iOS and Android app stores. Users can make payments using cryptocurrencies in their wallet, or from their credit card, debit card, or bank account. Users will be able to easily withdraw their cryptocurrencies to fiat whenever they want.

**Wallet**

The team will be working closely with the TRONLink team to provide premium wallet services that will be optimized and expanded for the WINk platform’s audience. In the future, WINk will expand access to the platform so anyone can play no matter the type of cryptocurrency they hold.

**Regulatory Compliance**

WINk will fully comply with gaming regulations for different jurisdictions. The team has already started the compliance process and is in the process of obtaining relevant licenses in Curaçao and Costa Rica. The team is also planning to work with regulatory agencies around the world to get all the necessary documents and licenses.

WINk has made great efforts to ensure compliance of our interactive gaming platform. Both the Curaçao and Costa Rica licenses are expected to be obtained before the project’s official launch. As a fully licensed and legal interactive gaming platform, WINk will eliminate the possibility of being shut down by authorities and continue to grow in a sustainable manner.

Why did we choose Curaçao? Curaçao Gaming is one of the oldest online gaming regulators in the world and we will receive a master gaming license issued by their Ministry of Justice. A Curaçao license has no restrictions on the territories which its licensees intend to do business with. Here are additional details for the license.
Official Decree of the Central Government of Curaçao (formerly the Netherlands Antilles) No. 365/JAZ dated August 18, 1998 No. 14 signed by the Minister of Justice laying down the Master License granted to Gaming Services Provider allowing the operation of Games of Chance on the International market via service lines. Business scope includes Curaçao and also in countries where there is no requirement to a local license.

Why did we choose Costa Rica? A Costa Rica gaming license allows us to get players from many countries besides Costa Rica. This means our games are open to users from all legally gambling countries. Furthermore, WINk is able to run most kinds of gambling under the Costa Rica license. This means we can also launch sports games, quiz games, lotteries, and much more.

To reiterate, both Curaçao and Costa Rica licenses are in the process of being acquired and it is expected that both will be obtained before WINk’s official launch.
Tournaments

The platform will be hosting several tournaments to engage the WINk community and TRON fans in general. Recently, the team hosted the very first Charity Poker Cup together with Binance, TRON and Litecoin. This event brought together Binance Co-founder & CEO CZ, TRON Founder Justin Sun, Litecoin Founder Charlie Lee, and other leaders from industries including professional basketball, eSports, and entertainment.
Roadmap

Q3 2019
- WINk rebranding
- WINk Poker launch
- WINk Sports launch, beta version
- On board more crypto platforms, phase 1, BTC, ETH, LTC
- User Hierarchy
- Acquisition of gaming licenses

Q4 2019
- On board more crypto platforms, phase 2, EOS, ERC 20 token, etc.
- WINk Sports launch official version
- Partner more DApps
- Improve on User Hierarchy
- Ecosystem fund launch

Q1 2020
- Stablecoin integrations
- SDK and API release
- Partnership with portals for wallets and DApp info sites
- Launch the open platform

Q2 2020
- Partnership with major traditional gaming enterprises
- Partnership with European soccer clubs
- Launch gaming DApp store
- User acquisition with Opera and BitTorrent

WINk’s timeline is subject to change. Follow our channels to receive the latest additions or changes.

Compared to more centralized gaming platforms, the TRON-based platform WINk provides a better user experience.

- Games will have auditable smart contracts
- Most games will allow users to keep complete custody of their funds
Please visit Wink.org for more information.

- Users will receive cryptographic tokens and other rewards for playing
- Name-brand games and developers will form partnerships with the platform
- Social features and exclusive events to engage the community
- Name brand partnerships through TRON & BitTorrent

By giving users custody of their funds and deploying transparent DApps, WINk puts the player first. Innovations such as the exclusive WIN token and “play to mine” modes will ingratiate VIP users, making this a sticky platform with a loyal fanbase. Despite almost zero advertising costs, WINk has grown into the most recognizable brand in blockchain gaming.
Team

Together, the team behind WINk has decades of experience in gaming, blockchain, and numerous other industries. We are united by our passion for blockchain technology and how it could revolutionize the gaming industry.

Like many others, Bitcoin’s meteoric rise in 2017 caught our attention, and learning of the technology’s potential fully captured our imaginations. Our core team members left their previous projects, started researching blockchain, and explored the possibilities of getting involved. TRONbet started out as a small side-project composed of the 3 founders, but quickly grew to a team of 11 full-time members. With an investment from the TRON Arcade Fund and the upcoming rebrand, we’re looking forward to what the future holds.

With members coming from teams all around the world, WINk is a truly global project. 3 of the 11 team members come from gaming and product management backgrounds, whereas the other four are blockchain veterans, participating in the industry as developers in addition to operations and business development managers. Several team members on the gaming side also had a hand in developing and delivering top mobile gaming content, and we’re excited to announce that these same people designed the game mechanics and development of WINk.

The WINk team is incredibly grateful for the opportunity to create this product for the millions of blockchain enthusiasts around the globe. We are confident that we’re the best team for the job, and will continue to add top talent to ensure the platform’s success.
Games

Dice

Dice was the flagship game when the platform first launched in late 2018. Despite the game’s simple mechanics, it has remained a crowd favorite for its polished and fast-paced gameplay.

Dice uses a random number generator to roll a value from 0 to 99. The object of the game is to have the dice roll fall within the range of numbers you choose. The smaller the range, the greater the risk and reward! Users can easily check their win chance via Dice’s user interface.

In order to play, users first select the amount of TRX, ANTE, or BTT they wish to wager. Users then choose whether they want to predict Under or Over, and select a number. If the user selects Under, all values under the number selected will be winners. If the user selects Over, all values over the number selected will be winners.

If the dice roll falls within the user’s winning range, they will receive a payout proportional to their chances of winning.
Moon is a game that mimics the exhilarating highs of the cryptocurrency market. Players are paid based on a multiplier that starts from 1x and can reach highs of over 250x. The multiplier increases steadily, but can crash to zero at any point. Players can cash out at any point in time and receive the multiplier value.

Cashing out your winnings is as easy as clicking a button, or you can risk it all to go for the moon!
Ring & Duel

Cross your fingers and go for the gold! TRONbet fans across the world all dream of that juicy 50x payday. Players choose which color they predict the wheel will land on. Grey rewards 2x the players wager. Red rewards 3x. Blue rewards 5x. Gold rewards 50x.

Play against the house in Ring, or go head to head with other players in Duel. Players create a custom game with their desired wager and number of players. Once the room fills up, the wheel spins to decide who scoops the pot!
TRONbet has partnered with premier slot machine developers to deliver a genuine casino experience. Slots like Bison Trail are found in almost every casino across the globe, and are now available for your enjoyment anywhere and at any time. TRONbet currently hosts 31 different slot games. Look out for massive bonuses in each!
Table Games

The game offers the full suite of table games commonly found in casinos, including blackjack, roulette, baccarat, sic bo, and Russian poker. High limits and multiple variants for popular games help cater to every type of player.

Please visit Wink.org for more information.
Poker

By adding the benefits of cryptocurrency to a polished online poker product, the team has hit on something big. TRX allows users to deposit and withdraw instantly, unlike traditional online poker platforms that might even withhold funds. Low to no rake helps players win bigger and more consistently, and the vibrant community ensures that action will always be found. Poker will continue adding exciting features, like tournaments and rake back, to its already solid foundation. As the platform grows to become the premier blockchain gaming hub, the game will bring decentralization, transparency, and accessibility to the online poker community.
HyperSnakes

Created by MixMarvel, the acclaimed studio behind HyperDragons, HyperSnakes introduces new abilities and battle royale mode to classic Slither.io gameplay.

Players can compete with each other for free (and earn cryptocurrency just for participating), or stake their own TRX (TRON’s native coin) to compete for massive prize pools.

HyperSnake’s core gameplay is similar to its predecessor. Control your snake avatar, collect dots to grow longer, and defeat other players to become the longest snake in the arena. The mechanics are easy to pick up, but only the most skilled players will walk away alive.

MixMarvel & TRON are trailblazing the next generation of gaming where players will finally be rewarded for their contributions to the gaming ecosystem. Look forward to participating in the revolution on TRONbet.
BLOCKLORDS is a blockchain strategy game where players vie for control of cities and kingdoms that provide immense economic power. Level up and equip your hero with the best items to give your army an edge on the battlefield.

The trading of assets is a core aspect of blockchain games and will of course be included in BLOCKLORDS. Since each item has a unique look, quality, and attribute, value will differ based on player demand. Early generation assets can be burned to create more powerful items in later gens, meaning early players will have a distinct advantage.

City lords will earn taxes on all trades made within their cities, as well as dividends from the city coffers, creating a strong incentive for players to conquer as much territory as possible!
SkyPeople

Dragon Castle gives the TRON community a taste of what the SkyPeople has become known for: stunning visuals and polished gameplay mechanics. Slay bosses, complete quests, and spinning the Lucky Wheel!

Stay on the lookout for SkyPeople’s next release. They’ll be bringing an exciting RPG to the TRON network that is sure to attract the masses.
Team Goo

Goo was created by MrBlobby to bring life to the genre of idle games on the blockchain. EtherGoo was the first iteration and was launched mid 2018. Following the dapp's success it was later evolved, re-balanced and ported across to the fast Tron network to give players a more real-time idle game experience. TronGoo was launched early 2019 and remains one of Tron's most transacted game.

Goo's core gameplay involves players amassing a wide range of units and items for further Goo production and PvP battles, in order to earn TRX based on their production!

The Goo team are now aiming to innovate once again on the Tron Network, with several projects planned for 2019. Their first is a deflationary token called Frags, which will be getting a version of Goo later. They are also looking to harness Tron's network to build a powerful Trading Card Game, as well as onchain lootcrates. The Goo team is looking forward to guide the Tron future of dapps.
